

Actis VC Light Fixtures

A | Studio quality lighting

Actis VC Light Fixtures use a directional louver that provides studio quality lighting

B | High efficiency

By combining angled and parabolic blades, Actis VC Light Fixtures can provide the highest level of lighting efficiency and control

C | Applicable for multiple solutions

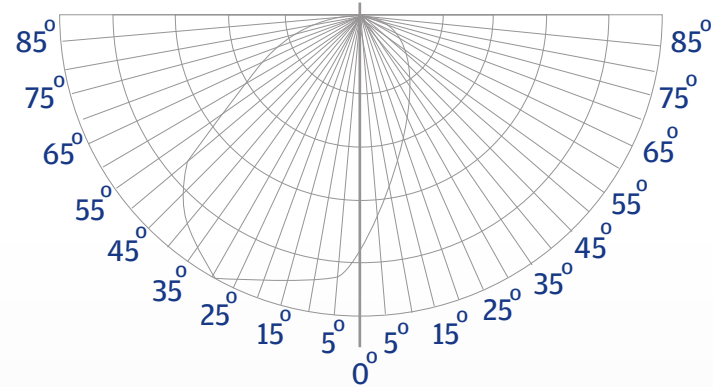

Extremely versatile, delivers high quality images for Video Conferencing, Telepresence Suites, Training Centres and more

Advanced Lighting Efficiency and Control

Actis VC Light Fixtures are a sophisticated solution for creating studio quality lighting in communication facilities for Video Conferencing, Telepresence Suites, Training Centres and more.

The Actis VC Light Fixtures create extremely efficient lighting for special applications that require highly restricted distribution in one direction, the majority of distribution in the opposite direction and 45 degree cut-off in the perpendicular plane. This is achieved by combining angled and parabolic blades which deliver the highest levels of efficiency and lighting control.

The dimensions of these fixtures allow it to adapt and fit into most international ceiling modules.

Angled Blades create an ultra-efficient Light Distribution Curve

VC Light Fixture used for Telepresence

VC Light Fixture used in Training Room

Models Available

Fixture Models	No. of lamps	Electronic switching on/off	Electronic dimmable ballast
VC-45LF - 2 x 2 - 2 x 55W - S	2	Yes	No
